

## Vaccination is NOT Immunization

There are only three facts needed to know about vaccines:

1. Vaccines are **NOT** required for children to go to school or stay in school. Forty-eight of the fifty states have parental exemption. Only two, West Virginia and Mississippi require a physician to sign off. In the Commonwealth of Pennsylvania, Section 28 Paragraph 23.84B clearly states: "Children need **NOT** be immunized if the parent, guardian, or emancipated child(age 18 or older) objects in writing." It does **NOT** matter what religion one professes, or if they are atheist. **Any student can be exempted from ALL vaccines.**

2. Vaccines do **NOT** work. The vast majority of people contracting the diseases were vaccinated for them! For example, at Ohio State University in 2014, 148 of the 153 students contracting the mumps were "fully vaccinated" according to the university's health records. At Stevens Institute in New Jersey, **ALL (100%)** of the students contracting mumps in 2014 had been "fully vaccinated." According to the Centers for Disease control, most of the students coming down with whooping cough(pertussis) were fully vaccinated. Medical journals are replete with examples of outbreaks of measles, mumps, chicken pox, and pertussis being almost exclusively among the previously vaccinated, ranging from 85%-99%. Recently many professional hockey players in the NHL came down with the mumps. All had been "fully vaccinated" previously! The CDC admits that this year's flu vaccine was only 23% effective, meaning that 77% of the people receiving the flu shot came down with the flu. The national incidence for contracting the flu was only 2.5%. So someone receiving the flu shot had a 30 times **GREATER** chance of getting the flu!

3. Vaccines **ARE DANGEROUS!** Ingredients in vaccines include formaldehyde, antifreeze, nail polish remover, mercury, lead, aluminum, animal tissues, blood, and fluids, and many contain **aborted human fetal tissue!** In the past year a number of staff members at Jefferson Hospital contracted Guillain-Barre paralysis after getting the flu shot. The epidemics of juvenile diabetes, allergies, attention deficit, and autism, all a rarity before 1980, have been linked to vaccines and the toxins contained in them. The U.S. vaccine court has awarded **BILLIONS of DOLLARS** to families who have proven that their children were damaged by vaccines including for showing the vaccine-autism link.

The diseases so feared by the medical establishment, such as measles, mumps, chicken pox, and the flu, are by and large harmless, self-limiting and short term diseases. **By contracting measles, mumps, and chicken pox, one attains lifetime permanent immunity.** People of my generation

obtained this natural immunity by contracting these diseases, often intentionally through the intervention of co-operating parents so that the children would get the disease and therefore achieve permanent immunity. By contrast the artificial immunity does not work, as cited above. And lest people erroneously think that the decline in incidence of these diseases is due to vaccinations, the facts are that all of these diseases, including polio, were well on their way out **BEFORE** the introduction of vaccines.
